One of the first products offered by Iron Horse Engineering, Gauge Support Fixtures allow for “top-down” construction, significantly reducing installation times. By supporting the rail from above, contractors are able to make adjustments in gauge and alignment with ease, prior to pouring concrete. GSF’s reduce the need for additional shimming and adjustments typically required in “bottom-up” installation.

**Benefits** Reduced labor cost  
Rental & Buyback programs  
Fits any rail section  
Quick, fool proof installation  
Reusable

**Features** Simplicity- Fully adjustable gauge, cant, and elevation  
Made from high quality steel for repeat use  
Head grabbers or bottom support plates available  
Rental, maintenance and Buyback programs  
Adaptability- Multiple gauge & rail profiles  
Shimless construction

**Just a few examples of projects where gauge support fixtures have been used.**
